Job Description: Full-Stack Engineer (Node.js)

Role Overview

We are seeking a **Full-Stack Engineer (Node.js)** with around **5 years of experience** to build scalable, user-centric web applications. You will own features end-to-end—from backend APIs to frontend experiences—and contribute to architectural decisions as the product evolves.

Key Responsibilities

- Develop backend services using **Node.js** (Express, NestJS, or similar frameworks)
- Build modern, responsive frontend applications using **React, Next.js, or similar**
- Design and maintain **REST or GraphQL APIs**
- Model, query, and optimize application data using relational or NoSQL databases
- Ensure application performance, scalability, and security
- Collaborate with product, design, and engineering teams
- Write automated tests and participate in code reviews
- Troubleshoot and resolve production issues

Required Qualifications

- ~5 years of experience in **full-stack development**
- Strong proficiency in **JavaScript / TypeScript**
- Solid experience with **Node.js** backend frameworks
- Strong frontend fundamentals (HTML, CSS, modern JS frameworks)
- Experience with databases (PostgreSQL, MongoDB, or similar)
- Familiarity with Git and standard development workflows
- Understanding of API design, authentication, and authorization

Nice to Have (AI & Advanced Capabilities)

- Experience integrating **AI or LLM services** into Node.js applications
- Familiarity with AI-powered features such as chat interfaces, recommendations, or content generation
- Understanding of **prompt engineering** and managing structured AI responses
- Exposure to **vector search**, embeddings, or retrieval-augmented generation (RAG) concepts
- Experience orchestrating AI calls alongside traditional APIs and background jobs
- Awareness of operational considerations for AI systems (timeouts, retries, cost, observability)
