Job Description: Full-Stack Engineer (Python)

Role Overview

We are looking for a **Full-Stack Engineer (Python)** with around **5 years of experience** to design, build, and scale modern web applications. You will work across backend and frontend systems, collaborate closely with product and design teams, and contribute to building reliable, performant, and maintainable software.

Key Responsibilities

- Design and develop backend services and APIs using **Python** (FastAPI, Django, Flask, or similar)
- Design, implement, and optimize **database schemas and queries** (PostgreSQL, MySQL, or similar)
- Implement authentication, authorization, and security best practices
- Write clean, well-tested, and maintainable code
- Collaborate with cross-functional teams to deliver end-to-end features
- Debug production issues and continuously improve performance and reliability
- Participate in code reviews and contribute to engineering standards and best practices

Required Qualifications

- ~5 years of professional experience in **full-stack web development**
- Strong proficiency in **Python**
- Experience building **REST or GraphQL APIs**
- Experience with **relational databases** and ORMs
- Familiarity with Git and collaborative development workflows
- Understanding of basic DevOps concepts (CI/CD, Docker, cloud deployments)

Nice to Have (AI & Advanced Capabilities)

- Experience integrating **AI/ML or LLM APIs**
- Familiarity with AI-driven features such as document parsing, summarization, classification, or semantic search
- Exposure to **embeddings**, vector databases, or similarity search concepts
- Understanding of prompt design and handling **structured AI outputs** (e.g., JSON responses)
- Experience running AI workloads via background jobs, async processing, or batch pipelines
- Awareness of AI operational concerns such as latency, cost optimization, and data privacy
