Summary

Full-Stack Software Engineer with 5+ years of experience building scalable SaaS and enterprise applications. Specialised in React, Vue, Node.js, MongoDB, MySQL, and Elasticsearch. Experienced in real-time systems, microservices, and AI-driven e-commerce platforms, delivering high-performance features for millions of users.

Skills

React · Vue.js · Node.js · MongoDB · Redux · REST · Elasticsearch · AWS · Microservices · JSON · Socket.IO · Vuex · HTML · Git · GitHub · Figma · Tailwind CSS · Typescript · Pinia

Experience

Dew Solutions Pvt Ltd — GURUGRAM, IN

Software Engineer — 06/2022 - Present

Innovative company specializing in building software solutions

- Engineered full-stack chat, search, and user services using React, Vue.js, and Node.js microservices, enabling scalable architecture for global deployment.
- Built multilingual message storage with parallel translation pipelines, delivering messages approximately 40% faster.
- Developed reusable front-end components and optimized rendering with performance-focused techniques, improving UI performance for about 10,000 concurrent users.
- Designed MongoDB and MySQL schemas with efficient indexing, accelerating queries and improving data retrieval.
- Implemented Elasticsearch-based product search, reducing response time by approximately 50% for over 10 million users.
- Refined search indexing and query strategies for high-traffic catalogs, ensuring consistent performance.

AVAYA (via VACO) — PUNE, IN

Software Engineer — 05/2021 - 06/2022

Global leader in business communications

- Delivered real-time messaging features for Avaya Spaces, supporting ~100k daily active users
- Implemented Direct Messaging and Group Chat badge counts with React.js, Node.js, and Socket.IO, improving real-time notification reliability
- Developed reusable frontend/backend modules, standardizing development and cutting repetitive code by ~25%
- Refined MongoDB queries and structures, improving system response time for messages and notifications
- Resolved production incidents, reducing average issue resolution by ~35% and minimizing downtime

FIVERR — REMOTE

Freelance Developer — 04/2020 - 04/2021

A popular freelancing platform connecting clients with developers

- Delivered SaaS and e-commerce applications using React.js and Node.js for 5+ clients, including feature-rich admin dashboards
- Managed full project lifecycles, from requirements gathering to deployment, consistently delivering on schedule
- Built reusable components and backend services, accelerating feature development by ~20%

Projects

Cilory – AI-Driven E-commerce Platform (Vue.js, Node.js, MySQL, Elasticsearch)

Built scalable Elasticsearch-powered search and product catalogue systems for millions of users, improving response time by ~50%. Optimised MySQL schemas and frontend performance to support 10,000+ concurrent users while ensuring reliability in high-traffic environments.

ArkChat — Real-Time Collaboration Platform (MERN Stack)

Built a real-time chat and collaboration platform (ArkChat) using the MERN stack with Socket.IO, supporting internal and external teams with Facebook-like messaging features. Delivered scalable messaging, group chats, and notifications for high-concurrency usage.

Key Achievements

Pat On The Back Award
Received the 'Pat On The Back Award' at Dew Solutions for outstanding performance

National-level Table Tennis Player
Recognized as a National-level Table Tennis Player (CBSE)

Client Appreciation
Appreciated by Avaya client for Direct Messaging feature ownership and production stability
